#Back to pre-crisis?

During these days Eurostat is publishing, on its Twitter page, information regarding European GDP, unemployment and inflation rates, saying that the situation is going better, because EU is reaching pre-crisis level.

#SomethingIsChanging: **#EuroAreaGDP** is slowly growing, reaching the pre-crisis level. That is a good sign of economic recovery. During the first quarter of 2016 GDP increased by +0.6%, by +1.6% compared with the first quarter of 2015.

Let's make a comparison between **#EuroAreaGDP**, China and USA GDP growth rates for the first quarter of 2016. USA recovery seems to be slowest than Europe. China is still going strong.

GDP rates is going better, but there is still something that slows down optimism: **#UnemploymentRate** is not decreasing as we expected. There are some countries with an **#UnemploymentRate to high**, this fact is creating concern.

Euro Area 19

They are the Euro Area's country with the monetary union: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia, Spain

Euro Area 28

Euro Area countries which have not adopted Euro: Bulgaria, Croatia, Czech Republic, Denmark, Hungary, Poland, Romania, Sweden, United Kingdom

The newspapers voice: Europe is still weighed down by high debt, weak bank profits, high unemployment and vast excess capacity in the economy.

Youth unemployment in EU
THE GUARDIAN • 30th April 2016

50% of unemployed young people is an extremely high rate for the European Union, so we need to find a solution.

EU average unemployment rate is (slowly) falling

#UnemploymentRate in Euro area is too different between various local regions; prevalent rate is around 7.2 and 11.8 percent. South regions are in higher difficulty from the employment point of view, instead north-eastern regions have a lower unemployment rate.

Euro area #InflationWentDown again in April to 0.2%, in March was to 0.0%. Another bad news for our economy: deflation usually is a sign of #PossibleRecession for a countries, infact target inflation should be 2%.

Also #ExportIsInCrisis. Export is fundamental for Italian economy, but datas from March say "-5,2% on extra-European markets. Main causes are general turmoil in some nations and general word economic slowdown.
